

RAT-OFF Clear Gel SM

Rat/Rodent Deterrent

ALL Organic- NON TOXIC - GREEN PEST CONTROL

RAT-OFF Clear Gel is NOT a poison

Deters rats, mice, rodents, gophers, rabbits & other small mammals

RAT-OFF Clear Gel will prevent and deter unwanted rodents from entering!

Without harming the rodent or environment - Organic Pest Control

Safe to use indoors - No toxic fumes - No pesticides - Easy to use - NO residual chemicals

RAT-OFF Clear Gel should be an integral component of any integrated pest management (IPM) program. Rodent control begins by (1) Eradicating the site of infestation, (2) remediate the hosting environment and (3) Continuation of on-going pest control. RAT-OFF Clear Gel prevents rodent/pest entry through Cracks, crevices, holes, small holes and narrow entry. Keeping out pests/rodents after eradication is the most critical pest control phase if long term pest management is going to be successful.

RAT-OFF Clear Gel is a rodent repellent made with garlic oil, pepper and food grade mineral oil as its main active Ingredients. These combined ingredients are known to be effective in preventing small rodents and mammals from nesting and entering. This is not a pesticide poison and is completely safe to use. There are four (4) main reasons that make RAT-OFF Clear Gel very effective:

How RAT-OFF Clear Gel Works?

- The active ingredient called garlic oil maintains nose resistant properties that mammals including dogs and cats find very repulsive. Many rodents use scent to determine direction and safety; the permeating astringent garlic odor deters and excludes vermin and rodents from further entry
- Pepper used has not been dried in the sun but harvested from the pepper tree. The concentrated effect of the (pepperin) causes mammals to feel a blistering heat sensation on sensitive tissue and the "heat" factor on the exposed body areas like eyes, tails, paws and soft tissue deter the animal from proceeding further.
- The gel's tackiness stays with the rodent when exposed to RAT-OFF Clear Gel and helps to spread the active ingredients on body parts; which in turns trains & reinforces the rodent to exit elsewhere and communicate danger. Exposure to RAT-OFF Clear Gel will **not hurt or poison the rodents** or other animals/mammals.
- RAT-OFF Clear Gel is **eco-friendly**, unlike products made with polybutene or capsaicin (a regulated EPA chemical) ; RAT-OFF Clear Gel will not pollute the environment – it is a natural organic pest deterrent. All ingredients used are listed by the EPA FIFRA 25b exclusion rule.

RAT-OFF Clear Gel Benefits?

- RAT-OFF Clear Gel concentrated garlic odor provides a scented barrier which rats and rodents can smell right away.
- RAT-OFF Clear Gel has two (2) active ingredients vs polybutene based products with NO active ingredients.
- RAT-OFF Clear Gel easy to apply at any angle on any surface for any small mammal species.
- RAT-OFF Clear Gel stops rodents from entering and therefore no dead rotting animals are left to die in the ceiling or walls.
- RAT-OFF Clear Gel lasts for up to 2 years (24 months or longer) if not substantially removed depending on the amount
- Rodent traffic or pressure at the site. Polybutene lasts for 3-6 months; becomes ineffective and must be re-applied
- Continually. RAT-OFF will not wash away, blow away, or collect dust and be removed with a putty knife at any time.
- RAT-OFF will prevent rodents from eating the plastic coating off wires, cables, conduits, insulation.

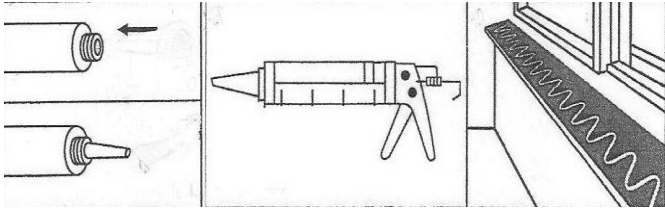

RAT-OFF Clear Gel

RAT & Rodent Deterrent

DIRECTIONS

Getting Started

Using wire cutters; cut off the tube nozzle. Next screw on application nozzle to open tube. Load tube in standard caulking gun (manual or electric) Next, cut application nozzle about half way down applicator at a slant. Squeeze gun slowly at first. Always use PPE – Personal Protection Equipment.

How much RAT-OFF Gel to use?

RAT pressure will dictate application volume, number of installations and frequency to deter rodents of all types; call for free consultation. Apply generously. Product will fail if not enough RAT-OFF gel is applied to repel/deter rodents. Apply where rodents or vermin enter, visit and nest. Use where rodent pressure and augment use after infestation has been eradicated to organically PREVENT future infestations.

Application Instructions

One tube = 10'-15' LF of application using ½ bead 3-4 inch width. Measure the application area before ordering.

Each 10oz tube provides 10' – 15' linear feet of surface coverage using a ½ bead and 4 "zig-zag pattern. Do not apply prior to rain, snow or sleet. For best results, clean surface prior to application. Apply in dry conditions only. The more surface exposure to the gel the more likely the pigeons are to leave quickly. RAT-OFF Clear Gel will not wash away in normal rain conditions.
